

Chapter 8: Weight and Capacity

Worksheet 8: Weight and Capacity

Learning Objective: Measure and convert weight (mg, g, kg); solve addition, subtraction and multiplication word problems involving weight in market and shopping contexts.

Worked Example:

A shopkeeper has 5 kg of rice. He sells 2 kg 250 g to a customer. How much rice is left?

Solution: 5 kg = 5,000 g. Sold = 2,250 g. Left = $5,000 - 2,250 = 2,750$ g = 2 kg 750 g.

Questions (1–20)

1. How many grams make 1 kilogram?
2. Convert 2 kg 300 g into grams only.
3. Convert 4,500 g into kg and g.
4. Which is heavier: 1 kg or 900 g?
5. Write 3 kg in grams.
6. A bag of wheat flour weighs 10 kg. If 3 kg 750 g is used, how much remains?

-
7. A vendor sells 2 kg 500 g of potatoes and 1 kg 750 g of onions. Find the total weight sold.

 8. A fruit basket weighs 850 g when empty. With fruits, it weighs 3 kg 200 g. Find the weight of the fruits alone.

 9. One packet of biscuits weighs 200 g. How many packets make up 5 kg?

 10. A shopkeeper sells sugar in packets of 1 kg 250 g. How much sugar is in 6 such packets?

 11. A grocery order has rice (4 kg), dal (2 kg 500 g), and sugar (1 kg 750 g). Find the total weight of the order.

 12. A truck carries 500 kg of vegetables. After delivering 175 kg 600 g to one shop, how much is left?

-
13. A weighing scale shows an empty basket as 500 g. After adding apples, it shows 4 kg 100 g. Find the weight of the apples.
14. 8 identical boxes of soap weigh 12 kg in total. What is the weight of each box?
15. A baker uses 2 kg 500 g of flour for one batch of bread. How much flour is needed for 5 such batches?
16. A shopkeeper has 25 kg of rice and packs it into bags of 1 kg 500 g each. How many full bags can he make, and how much rice is left over?
17. A fruit seller buys a crate of mangoes weighing 18 kg for Rs. 900. He sells them in $\frac{1}{2}$ kg packs. How many packs can he make?
18. Three sacks of grain weigh 24 kg 500 g, 19 kg 750 g and 30 kg 250 g. Find their total weight, and the average weight per sack.

19. Look at the weight printed on a packet of food at home (atta, sugar, biscuits, etc.). If your family buys 3 such packets, what would the total weight be?
20. During a festival, your family buys 2 kg 500 g of sweets and 1 kg 750 g of dry fruits as gifts. Find the total weight carried.

Reflection Question: Why do you think shopkeepers use a weighing scale instead of just guessing the weight of items? Write your thoughts.

Real-Life Application Question: Visit your kitchen and find three food items with their weight printed on the packet (e.g., atta, salt, biscuits). List their weights.
