

Chapter 9: Coconut Farm

Worksheet 9: Coconut Farm

Learning Objective: Apply multiplication and division to counting, grouping and simple area and profit calculations in a farm/market setting.

Worked Example:

A coconut farmer has 15 rows of trees with 12 trees in each row. How many trees are there in total?

Solution: $15 \times 12 = 180$ trees.

Questions (1–20)

1. What is 24×6 ?
2. What is $144 \div 12$?
3. A farmer plants coconut trees in 8 rows of 9 trees each. How many trees in total?
4. Divide 96 coconuts equally among 8 baskets. How many coconuts per basket?
5. Multiply 35 by 4.
6. A coconut tree gives 80 coconuts a year. How many coconuts will 6 trees give in a year?

-
7. A farmer has 250 coconuts and packs them into bags of 25 each. How many bags does he need?

 8. 144 coconuts are shared equally among 12 workers. How many does each get?

 9. One sack holds 50 coconuts. How many coconuts are there in 14 sacks?

 10. A farmer sells coconuts at Rs. 15 each. How much money does he get for selling 40 coconuts?

 11. A coconut farm has 18 rows with 15 trees in each row. If each tree gives 60 coconuts a year, find the total coconuts produced by the farm in a year.

 12. A trader buys 500 coconuts at Rs. 12 each and sells them at Rs. 15 each. Find his total profit.

-
13. A rectangular coconut grove is 40 m long and 25 m wide. Find its area.
14. 360 coconuts are packed equally into boxes of 24 each. How many boxes are needed?
15. A farmer harvests 1,260 coconuts and distributes them equally among 9 relatives. How many coconuts does each relative get?
16. A square coconut farm has side 60 m, with one tree planted every 5 m along each side. About how many trees fit along one side?
17. A wholesaler buys 2,000 coconuts at Rs.10 each, but 50 are spoiled and cannot be sold. He sells the rest at Rs. 14 each. Find his total profit.
18. A farmer wants to plant coconut trees in a field of area 1,200 sq m, giving 20 sq m of space to each tree. How many trees can he plant?

19. Ask at home how many coconuts your family usually buys in a month and at what price each. Calculate the total monthly cost.
20. During a festival, a family needs 1 coconut for every 4 guests as prasad. If 48 guests are expected, how many coconuts are needed?

Reflection Question: Coconut trees are very useful – their water, fruit, and even leaves are all used. Name two uses of a coconut tree that you know from your own life.

Real-Life Application Question: Visit a local fruit/vegetable shop or market and find the price of one coconut. If you buy 5 coconuts, calculate the total cost.
