

Chapter 13: Animal Jumps

Worksheet 13: Animal Jumps

Learning Objective: Measure, compare and order distances (including decimals) using examples of animal jumps; solve simple problems involving decimal addition and subtraction.

Worked Example:

A kangaroo can jump 2.5 m in one leap, and a frog can jump 0.45 m in one leap. How much farther does the kangaroo jump than the frog?

Solution: $2.5 - 0.45 = 2.05$ m farther.

Questions (1–20)

1. Which is longer: 1.5 m or 1.05 m?
2. Write 2 m 75 cm as a decimal number of metres.
3. Round 3.68 m to the nearest whole metre.
4. Arrange in ascending order: 0.8 m, 1.2 m, 0.5 m, 1.05 m.
5. Add: $1.25 \text{ m} + 0.75 \text{ m} = ?$
6. A grasshopper jumps 0.35 m and then 0.40 m in the same direction. Find the total distance covered.

-
7. A kangaroo's longest recorded jump is 9 m and a deer's longest jump is 6.5 m. Find the difference.

 8. A flea can jump 0.02 m. How far would 10 such jumps cover in a straight line?

 9. A rabbit jumps 0.6 m per leap. How far does it travel in 5 leaps?

 10. A frog's jump of 0.45 m is how much less than a hare's jump of 1.2 m?

 11. Four animals jump these distances: cat 1.5 m, dog 1.8 m, squirrel 0.9 m, monkey 2.1 m. Order them from shortest to longest jump.

 12. A kangaroo makes 6 jumps of 2.5 m each. Find the total distance covered.

 13. A grasshopper's jump of 0.4 m is repeated 12 times. How far does it travel in total?

-
14. A frog species' longest jump is 2.2 m and shortest is 1.85 m. Find the difference.
15. A cat can jump 1.75 m and a dog can jump 0.95 m more than the cat. How far can the dog jump?
16. A kangaroo jumps 3 times, covering 2.8 m, 3.1 m and 2.6 m. Find the total distance and the average distance per jump.
17. An athlete's long jump is 0.65 m more than a kangaroo rat's jump of 1.35 m. A different animal's jump is 0.2 m less than the athlete's jump. Find the third animal's jump distance.
18. A frog needs to cross a puddle of width 1.6 m, jumping a maximum of 0.55 m per leap. How many leaps (minimum, whole number) will it need?
19. Measure how far you can jump (a standing long jump) using a tape or by counting footsteps. Write your jump distance in metres.

20. Compare your jump distance with a friend's or sibling's. Who jumps farther, and by how much?

Reflection Question: Different animals are built differently for jumping (legs, weight, etc.). Why do you think a kangaroo can jump much farther than a cat? Write your idea.

Real-Life Application Question: Recall an animal (cat, dog, grasshopper, or any other) that you've seen jump. Estimate how far you think it jumped, in metres.
